

Type of Incident

Fall from height

Summary of Incident

An associate was working from a 4 step mobile platform tightening a flange on a compressor. Whilst doing so, the platform started to move away from the compressor resulting in the associate falling a distance of 1 meter.

As a result of the fall the associate suffered multiple injuries which required hospital treatment.

Critical Factors

- Investigation currently in progress

Corrective Actions

- Corrective actions to be identified after a full investigation has been carried out
