

Type of Incident

*Eye Injury*

## Summary:

An employee was organizing goods, materials and preparing materials in the storeroom. As he went to move a can of solvent which was sitting on the top shelf to ground level, solvent spilled from the container over the employees face resulting in him injuring his eye.

Place where the drum was put

## Root Causes:

- Drum lid was not secured properly.
- Large drum stored too high on rack
- Failure to follow procedure

## Actions Taken Thus Far: Next Steps

- Review procedure and risk assessment for task and amend accordingly
- Communicate / retrain all relevant persons on the correct storage methods and in the importance of ensuring drum lids are properly secured.
