

Type of Incident

Foot Injury

Summary:

Whilst working offsite, an employee was transporting his toolbox back to his car when a piece of equipment fell out. The piece of equipment struck his foot resulting in the employee requiring medical attention.

No Pictures available

Root Causes:

- Load being transported was not secure
- Safety footwear was not being worn at that time

Actions Taken Thus Far: Next Steps

- Review risk assessment for task and amend accordingly
- Review available options for transporting tools / equipment safely
- Review the need of the wearing of safety footwear whilst transporting (in conjunction with risk assessment)
