

Type of Incident

Foot injury

Summary:

During a typical operation an employee dismounted his forklift truck and twisted his ankle.

Root Causes:

- The ground where the employee dismounted was uneven. (Lorry rails are embedded into the floor in this location)

Actions Taken Thus Far: Next Steps

- Review risk assessment for area and amend accordingly
- Review available options in reducing the likelihood of trips and falls in this area. i.e. consider parking requirements for trucks, high visibility strips at lorry rail location etc
- Communicate to all employees working in this area to be aware of their surroundings and to raise any concerns regarding slip, trip fall hazards.
